

ENKIVE is the email archiving product from The Linux Box.

KNOWLEDGE

Email is a record of organizational communication and an artifact of institutional knowledge. Email archiving and classification are critical processes for recovering the knowledge and ideas of an organization and the history of its interactions with the larger world.

**Enkive encourages management of email through classification and policy.
Enkive is built on Alfresco, an open source framework for document and records management.**

RETENTION

Throughout the day, employees send and receive business-critical email. Employees may delete messages that should be kept, or retain messages that should be discarded. Enkive captures email in parallel with your email system.

Enkive retains and purges email in accordance with the organization's policies, independent of user error, deliberate action and storage quotas.

RETRIEVAL

Critical information can be hidden in email attachments that are invisible to standard search tools. Archived mail needs to be easily accessed by original senders and recipients as well as other authorized agents. Enkive makes archived email available through users' ordinary email clients and an intuitive discovery interface.

Enkive permits searching in all email components and attachments.

REPORTING

Knowing who accessed what when in your archive can be critical.

Enkive provides a flexible audit policy and can report on search and access events.

COMPLIANCE

Compliance with laws and regulations governing communications, as well as litigation support, are increasingly important objectives for organizations inside and outside the United States.

Enkive permits recovery of email pursuant to controlling regulations and eDiscovery requirements in support of an organization's retention policies.

SECURITY

Security means knowing that archived content is accessible only to authorized users.

Enkive provides role-based access control. Enkive can encrypt all stored email.

STORAGE

A single attachment may be sent and later re-sent to tens, hundreds or thousands of employees. Most email systems are not designed to efficiently manage such duplicated content.

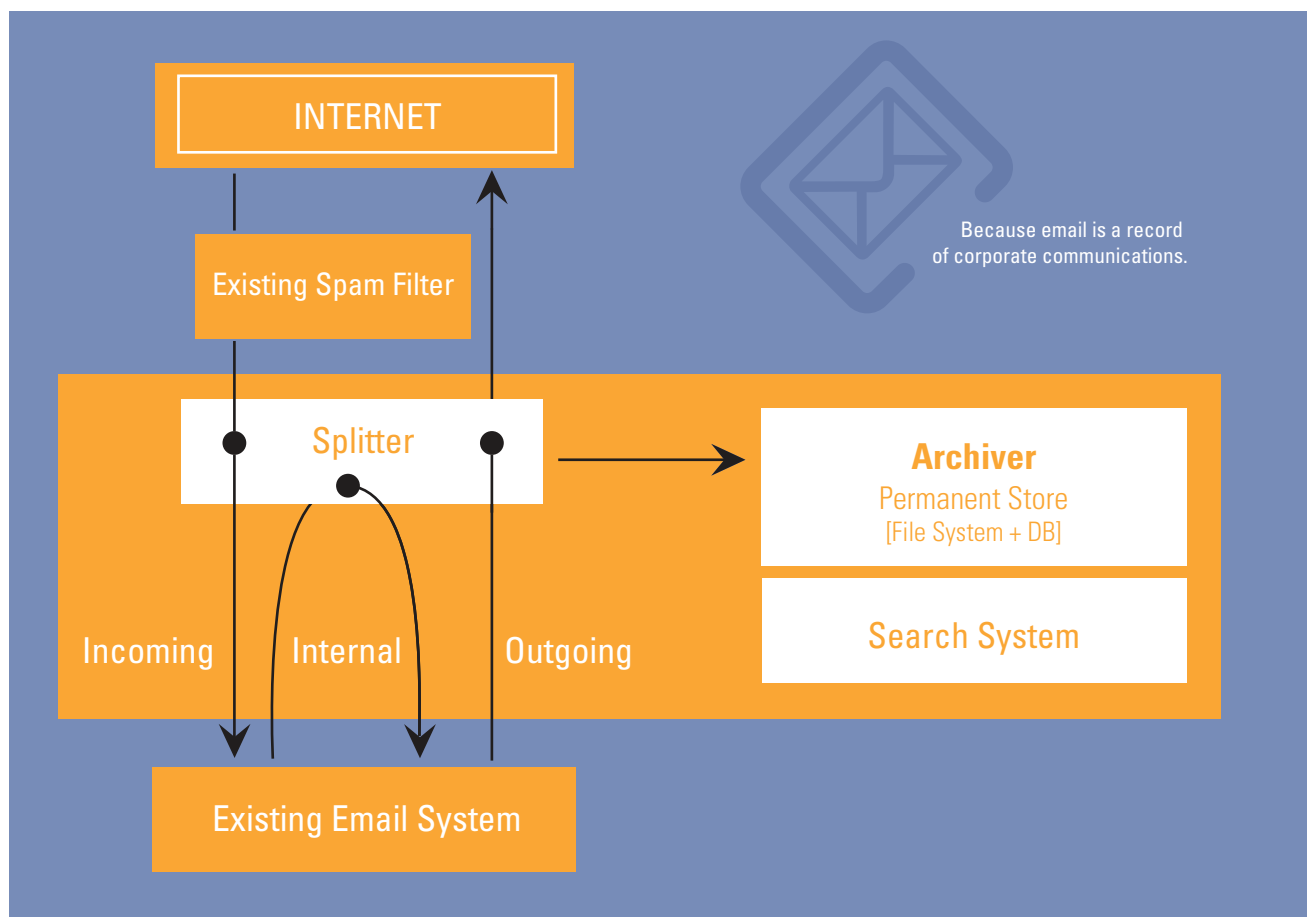

Enkive reduces storage costs through de-duplication of messages and attachments.

OPEN SOURCE

Organizations need to control costs and retain control over IT infrastructure, information and processes. You need a vendor to be there to support you.

Enkive is open source software. The Linux Box corporation, the maker of Enkive, has been supporting and enhancing open source products since 1999.

HOW ENKIVE WORKS

ABOUT THE DEVELOPER: **THE LINUX BOX**

Founded in 1999, The Linux Box Corporation is a software development organization specializing in open source technology and the Linux platform. The Linux Box offers professional services including customization and integration to a broad range of clients in industries ranging from energy and financial services to government, life sciences and the utilities.

The Linux Box software products include a project planning system and an email archiving solution. The Linux Box is an ISO 9001:2000 certified since May 27, 2007.
